ABSTRACT

This flip chart consists of illustrations of vocabulary items critical to understanding a driver training class. A short explanation and a list of questions and responses for use with the visuals are also included.

English for Driving - Visuals is the third in a group of three publications that comprise the instructional materials of an English for Driving course designed to teach non-native speakers of English the vocabulary necessary to understand driver training classes. It is to be used in conjunction with English for Driving - Teacher's Guide and English for Driving - Student Workbook.

VISUALS

USE: The visuals are to be used in every class for vocabulary memorization and review, pronunciation practice, dictations and testing, as described in the Teacher's Guide.

VOCABULARY: Of the many driving vocabulary words to be practiced in the Student Workbook, the items depicted in the visuals are the most critical for student understanding of a driving instructor. While the item "jumper cables" may be critical to a student in a driving situation, it is probably not essential in the driving class. The words elicited by the visuals must be in the students' active vocabulary.

HELPFUL HINTS: Color the illustration of the vocabulary item red when necessary for clarity. For example, in 7-A (go ahead) color the arrow, in 14-I (crosswalk) color the crosswalk, in 52-A (pedestrians) color the people, etc..

Put the visuals in a ring binder in order with the numbers out. The binder can then be placed in the blackboard chalktray during dictations, freeing the instructor to observe and aid students.

NUMBERING: The number indicates the page in the Student Workbook on which the item is introduced. The letter indicates the order of the item on the page. 26-C means the item first appears as the third critical word on page 26.

T-QUESTIONS: A list of possible questions to be used with the visuals follows. Teachers are encouraged to add questions or modify them to suit the competency levels of the class. Any modifications should be written down and used consistently.

S-RESPONSES: The object is to elicit the same correct response(s) from the students each time the visual is used. Slower students will learn from the faster ones if the answers remain the same each time the visual is shown.
